

MICR Check Scanning Module

Eliminate Manual Data Entry for Payment Processing of Checks!

Save time and eliminate data entry errors for your payment processing. The MICR Check Scanning Module includes a MICR Check scanning reader machine. The machine reads the magnetic codes on the bottom of the check. Simply run the payer's check through the check reader machine. Contract Collector automatically stores the payer's bank information in a secure format. After you've scanned a check once, Contract Collector will automatically bring up the payer's Payment information and apply the check to that contract record. All you do is verify the payment amount and you're done!

Contract Collector can print "Barcode" tenant coupons. When payers send in a payment with the payment coupon, you can use the Handheld Laser Scanner to scan the barcode on the coupon. Contract Collector will automatically bring up the payers payment information. You just verify the payment amount and you are done!

It's a simple and easy solution that will speed up data entry to a fraction of the time and eliminate the possibility of posting a payment to the wrong account.

This module is available as an add-on module for an additional cost.

Call our Product and Information department at **(888) 344-EDGE** or **(509) 852-8000** to get more information on the Contract Collector MICR Check Scanning Module.

* This module **includes** the MICR Check Scanner machine and the Handheld Barcode Scanner device.
